# **Inquiry Workshop for Middle School Science & Math Teachers**

***"Teaching the Science in Everyday Life"***

The University of Arkansas GK12 KIDS Program was designed to pair graduate students with backgrounds in Physics, Engineering, and Chemistry with middle school math and science teachers in order to develop and implement inquiry lessons. Two goals of the program are to excite middle school students about the wonderment of science and to assist teachers in adapting inquiry into their existing lesson structure. In January 2005 the KIDS staff will offer an inquiry workshop that is designed to enhance the use of inquiry by middle school science and math teachers. All of the demonstrated activities will provide reinforcement to state standards. Please join us for this exciting workshop.

### ***Benefits to the Teacher:***

- **Free Workshop**
- Enhancement of existing science and math knowledge
- Enhancement of Inquiry adaptation skills
- Introduction to the GK12 program
- Lunch provided
